

Devil Technology Relies On Trend Micro™ Solutions to Provide Customers with Secure Operations

The systems integration experts at Devil Technology deploy technology that goes beyond customers' expectations. Repeat business, the mainstay of their success, requires that every deployment includes a comprehensive security solution that can handle a range of threats.

“Trend Micro InterScan Gateway Security Appliance sits at the network edge and blocks a broad range of infiltrations that would otherwise require manual cleanup and, therefore, drive up support costs.”

— Andrew McKenzie
General Manager and Consultant
Devil Technology

KEY BENEFITS

- Protection against viruses, spyware, spam, worms, Trojans, and phishing
- Reduced network burdens resulting from Web and email content filtering at the gateway
- Web-based centralized support, for easy management
- Easy install, coexisting with in-place firewall appliances
- Automated desktop cleanup of spyware and viruses

Escalating Threats

To protect their own business as well as their customers' businesses, Devil Technology selects Trend Micro security solutions. The Trend Micro™ Client Server Messaging Security for SMB has become the company's platform of choice for its customers in the construction and finance industries. Most projects involve the integration and installation of technology, with the customer's in-house IT team taking over the ongoing management responsibilities once Devil Technology finishes. Leaving customers with a Trend Micro security solution in place gives them confidence that security issues will not erode overall customer satisfaction, even as industry threats escalate.

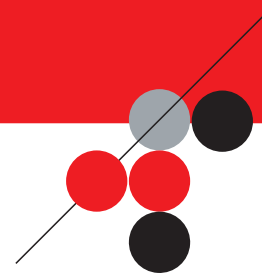

Why Trend Micro?

Devil Technology, seeking the best solution to defend customers against multiple threats, evaluated Trend Micro™ InterScan™ Gateway Security Appliance. “We can't just focus on annoying virus attacks today—threats have escalated to a more malicious and business-impacting level,” says Andrew McKenzie, general manager and consultant at Devil Technology. “Trend Micro InterScan Gateway Security Appliance sits at the network edge and blocks a broad range of infiltrations that would otherwise require manual cleanup and, therefore, drive up support costs.”

Trend Micro InterScan Gateway Security Appliance delivers all-in-one, comprehensive protection against viruses, spyware, and spam. The gateway solution also guards against phishing attacks and attempts to steal financial and other confidential information. It enables compliance and protects productivity with Web and email content filtering at no extra cost. By automating the clean-up of viruses and spyware from desktops, it protects the availability and confidentiality of the network.

Transparent, Easy-to-Deploy Solution

The appliance solution gives the Devil Technology team an easy-to-deploy solution for existing networks. The Trend Micro InterScan Gateway Security Appliance can be dropped in with current firewall and appliance solutions for an immediate extra layer of protection. “For our clients with slightly larger networks, the Trend Micro solution allows them to protect their existing investments without compromising performance. Clients benefit from the included Web content screening and filtering, and get control of major productivity problems from spam and other unwanted messages,” says McKenzie. “Internal networks are often max'd out already, and the Trend Micro InterScan Security Appliance can get the job done—offload the network from unwanted traffic—and help other services run better.”

Lower Total Cost of Ownership

“We really appreciate the easy-to-install nature of the Trend Micro solutions—we can get our jobs done faster,” says McKenzie. “But our customers benefit, too. The centralized management saves them time for the life of the deployment. With automatic updates and an intuitive administration console, they can manage security with a familiar browser interface.”

The Trend Micro InterScan Gateway Security Appliance filters out unwanted content before it reaches the company network. This results in many benefits to Devil Technology customers: preserved network bandwidth, increased server/desktop performance, protection of the confidentiality of network data, and less IT administration and help desk overhead.

An Expanded Line-up

Devil Technology customers will continue to enjoy secure operations with integrated Trend Micro solutions. Devil Technology also benefits from Trend Micro InterScan Gateway Security Appliance as it improves security while decreasing administration efforts. “My schedule is hectic already. Add to that my responsibilities for managing my network, servers, and user security, and you can understand why I really like our Trend Micro InterScan Gateway Security Appliances. They save me time—not just with a fast install, but also with easy management,” concludes McKenzie.

“We really appreciate the easy-to-install nature of the Trend Micro solutions—we can get our jobs done faster. But our customers benefit, too. The centralized management saves them time for the life of the deployment.”
