

# Estonian Post Stamps Out Malware with Trend Micro™ NeatSuite™

*To ensure prompt and accurate delivery of services, Estonian Post recognised the need to put in place a robust security solution to protect its IT infrastructure from viruses and spyware. Trend Micro NeatSuite provides threat protection at virtually every point in its network.*

***“In Estonia, most leading companies use Trend Micro and its solutions are tried and tested to be very reliable.”***

— Kaitti Kattai  
Head of Estonian Post's IT Group

## KEY BENEFITS

- Enables centralized management of gateway, mail, and file server security
- Guards against viruses, Trojans, worms, spam, and unwanted content
- Protects against multiple tactics employed by mixed-threat attacks
- Delivers automatic updates to ensure the network is protected against new threats

Estonian Post provides a full portfolio of services, including traditional postal services such as the delivery of letters, parcels and periodicals, as well as express, warehousing, transportation, financial, and other services. To ensure prompt and accurate delivery of these services, Estonian Post cannot afford any interruption of its IT infrastructure.

## Selecting Comprehensive Enterprise Protection

As part of its selection process, Estonian Post spent six months testing and comparing a wide range of different security vendor solutions, using an exceptionally thorough process conducted under open tender.

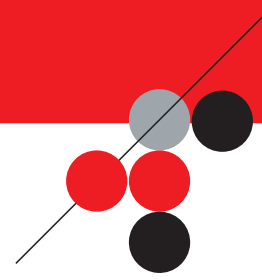

Following this rigorous process, Estonian Post considered Trend Micro NeatSuite as the perfect fit for the organization. NeatSuite is a comprehensive enterprise antivirus and content security suite designed to provide threat protection at virtually every point of the network—from desktop, mail server, and file server to the Internet gateway. Component products of the suite protect the entire organization from viruses, spyware, and other malicious code, as well as offering content filtering of both inbound and outbound messaging traffic, and mail-server based anti-spam capability.

## Global Capability with Local Strength

One of the main reasons for choosing NeatSuite was Trend Micro's strong presence in Estonia. “In Estonia, most leading companies use Trend Micro, and its solutions are tried and tested to be very reliable,” commented Kaitti Kattai, Head of Estonian Post's IT group. AS Stallion played a significant role in the implementation of Trend Micro NeatSuite across 1,500 users at Estonian Post, and also partners with Trend Micro to uphold the Trend Micro reputation in Estonia.

## Central Management Made Easy

An important consideration for the client was ease of management. The NeatSuite solution includes Trend Micro Control Manager™, which enables central management of antivirus, spyware, and personal firewall protection across all of Estonian Post's workstations, file servers, mail servers, and gateway servers. “We started using Trend Micro NeatSuite products in 2005 and found NeatSuite to have the key benefits important to protect our business,” said Kattai. Trend Micro technology ensures a fast virus response time, easy and seamless installation and integration, and the ability for central management, as well as a strong support for different platforms. “We were impressed with how well Trend Micro was able to provide us with a cost-effective way to protect virtually every point of our network,” added Kattai.

### Network Security at All Levels

Estonian Post is also using the NeatSuite component Trend Micro OfficeScan™ Client/Server Edition to combat viruses, spyware, and other malware at the desktop. "We were looking for a robust, user-friendly desktop solution that could be managed centrally, through a Web-based application. We have a considerable number of desktops spread throughout 500 buildings to serve our customers in Estonia. Centralized management seemed to be the most cost-effective way of keeping systems updated with the latest pattern file, scan engine, or software updates. This way, we can verify that all workstations are protected, and relieve employees of the burden of having to update their systems themselves. Trend Micro NeatSuite provides us with the necessary modules to protect our network from security attacks," concluded Kattai.

### Ensuring Business Continuity

Trend Micro Enterprise Protection Strategy delivered additional benefits. With multiple layers of products and services, this intelligent, comprehensive approach helps to protect the IT infrastructure from malware attacks, as well as reducing the pressure on the IT team to manage the IT security systems. Running Trend Micro NeatSuite means Estonian Post's network is protected from potential malware attacks, which could threaten the core of its business and ultimately affect the country's economy.
